Certifications

Google Data Analytics Certification

Strategic and analytical professional specializing in **AI process automation**, with deep hands-on experience identifying **AI use cases**, leading **proof-of-concepts**, and shipping **generative AI** and **agent-based** automation that delivers measurable operational ROI.

Skills

AI Implementation & Tool Building

SQL (Snowflake)

Data Visualizations

Cross-Functional Partnership

Workflow Automation

Python

Multi-Agent Systems

Work history

Technical Projects

(Built with Claude/Kimi K3/Hermes/Grok Bot/Python)

- Built **Training Terminal**, a single-file, browser-based coding terminal (**xterm.js**) for practicing **Python, SQL, JavaScript, and Rust**, with 200 curated questions across five gated tiers graded in the page through **Pyodide, sql.js**, and a sandboxed **Web Worker**, plus persisted progression
- Built **Model Bench Terminal**, a blind **LLM evaluation** bench that compares 2-4 models on the same prompt, and rebuilt its scoring after an audit caught **14 of 14** bad outputs passing, adding per-task frozen test sets, a versioned **code grader, sandboxed unit tests**, and **95% confidence intervals**
- Built a suite of **LLM-powered** financial tools, including a **client-side** wealth-planning workbook, an economic terminal that computes its own statistics instead of trusting the model's numbers, and a collector-car price tracker updated weekly through **GitHub Actions CI/CD**
- Built a self-serve **text-to-SQL** tool letting non-analysts draft schema-aware **Snowflake** queries in plain English, normalizing **9 LLM providers** behind one contract with a token-gated, metadata-only compliance design

Toast Inc

*Senior Capital Underwriter, Process Automation | Remote, TX |
December 2021 - Current*

- Build and orchestrate **AI agents** on a **multi-agent system** I designed, with an orchestrator routing work to scoped sub-agents, each with its own system prompt, tool access, and isolated context, that audit, validate, test, and document every tool before it ships
- Built the **evaluation and control frameworks** that make automation trustworthy, including defined-good-output criteria, **validation against known-correct results, fail-loud error handling**, and a hard rule that no sensitive data reaches a model
- Shipped **8 production tools** now in daily use across **underwriting, operations, and collections**, each turning a messy manual workflow into a reliable system
- Rebuilt a breaking funding reconciliation into an in-browser **four-source JOIN engine** with processor-specific match logic, audit labels, and manual override paths, cutting a **20-35 minute** reconciliation to approximately **40 seconds**
- Built and run a full-stack **case management app (Apps Script, JavaScript, Chart.js)** for a **10-person team** across **700+ active cases**, adding a self-serve, **SQL-style Data Lookup** that answers leadership's ad-hoc questions without a manual data pull

- Built a four-tool **underwriting and collections toolkit** (**React** dashboard plus zero-dependency browser bookmarklets sharing one parse/classify engine) that classifies **UCC/tax-lien filings** and renders color-coded routing recommendations, cutting my review time by ~**60%** and raising my throughput from **6-10 to 20-30+ applications a day**
- Monitor credit and portfolio health across a **\$2B+** lending book using **Snowflake SQL**, **Salesforce** reports, and **Hex** dashboards, building the risk signals and leadership analytics behind **\$500M+** in capital I have deployed

● **Ghost Strategies, LLC**

*Founder, Registered Investment Advisor | San Antonio, TX
November 2023 - Current*

- Designed and built a client-side **portfolio analysis terminal** (**HTML**, **Cloudflare Worker** proxy, **Python** data pipeline) with multi-brokerage import, look-through concentration, tax-aware rebalancing, and an **AI analysis workflow** that anonymizes every request under an **analysis-not-advice** compliance frame, verified by **111 automated checks** and a two-pass **multi-agent adversarial audit** that resolved **56 defects**
- Built a **Cloudflare Worker API proxy** fronting four market-data and five AI providers with **token authentication**, encrypted secrets, **KV caching**, provider **fallback chains**, and a health endpoint gating model selection, alongside a Python ingest pipeline computing returns, beta, alpha, and correlation matrices from ten years of price history
- Built a **LangGraph AI agent** for earnings analysis with **conditional routing**, **deterministic validation**, and a **retry loop** that fails loud to a human rather than shipping unverified output, authoring its state machine in Python
- Designed and operate a **multi-agent AI operating system** for lead research, enrichment, outreach, and content, with five specialist agents under an **orchestrator**, scheduled **Hermes Agent** jobs writing segment-scoped **JSON batches**, encoded geographic, segment, and compliance rules, and a custom **Lead Terminal** review app enforcing **human approval** before any send or publish

Education

Bachelor of Business Administration in Finance

The University of Texas At San Antonio, San Antonio, TX
