Certifications

Google Data Analytics Certification

Strategic and analytical professional specializing in **AI process automation**, with deep hands-on experience identifying **AI use cases**, leading **proof-of-concepts**, and shipping **generative AI** and **agent-based** automation that delivers measurable operational ROI.

Skills

- AI Implementation & Tool Building

- SQL (Snowflake)

- Data Visualizations

- Cross-Functional Partnership

- Workflow Automation

- Python

- Multi-Agent Systems

Work history

Technical Projects

(Built with Anthropic's Claude/Kimi K3/Hermes AI/Python)

- Built **Training Terminal**, a single-file, browser-based **coding terminal** (xterm.js) for practicing **Python, SQL, JavaScript, and Rust: 200 curated questions** across **five gated tiers**, running **real code** through **Pyodide, sql.js**, and a **sandboxed Web Worker**, with persisted progression
- Built **Model Bench Terminal**, a **blind LLM evaluation bench** streaming one prompt to **2-4 models in parallel** with live **cost and latency telemetry** and **blind ratings** feeding a **cost-vs-win-rate leaderboard**; my tools' production **model slots are now assigned from its recorded evidence**
- Built a **suite of LLM-powered financial/analytical tools**, including a **wealth-planning workbook** parsed entirely client-side, an **economic terminal** with a sourced-data research layer, and a **FastAPI asset tracker** with scheduled CI/CD actions
- Built a self-serve **text-to-SQL tool** letting non-analysts draft schema-aware **Snowflake** queries in plain English, normalizing **9 LLM providers** behind one contract with a **token-gated, metadata-only compliance design**

Toast Inc

*Senior Capital Underwriter, Process Automation | Remote, TX |
December 2021 - Current*

- Build and orchestrate **AI agents** on Toast's **Claude Code** and **Cowork**, with an **orchestrator** routing work to scoped **sub-agents** (workflow automation, code audit, technical PM, devops, technical writing) that **audit, validate, test, and auto-generate the SOP** for every tool shipped
- Shipped **10 production tools** now in daily use across Toast, replacing manual workflows that previously consumed hours of recurring team effort each week
- **Automate high-volume operational workflows** by shipping reusable tools, including a **Funding Verification Tool** (an in-browser **four-source JOIN engine**) that cut a reconciliation workflow from **20-35 minutes to 40 seconds**
- Spearheaded a **0-to-1 operational strategy** by running a **time study**, building an efficiency and ROI analysis, and shipping a **70% operational improvement**, partnering across Product, Engineering, and Operations end-to-end
- Built a **four-tool underwriting and collections toolkit** (React dashboard plus **zero-dependency** browser bookmarklets sharing one parse/classify engine) that replaced a brittle spreadsheet macro, **parsing, de-duplicating, and classifying UCC/tax-**

lien filings and rendering **color-coded application-routing recommendations**, part of a toolset that cut underwriting review time by **~60%**

- Designed and shipped a **full-stack case management web application** (Apps Script, JavaScript, **Chart.js**) across **700+ active cases**, evolving it into a **self-running system** with no-code configuration, **scheduled maintenance jobs**, and cached year-scoped analytics
- Authored complex **SQL** queries in **Snowflake**, **Salesforce** reports, and automated **Hex** dashboards that synthesize performance data and present executive-ready summaries across **\$500M+** in capital deployments

● **Ghost Strategies, LLC**

*Founder, Registered Investment Advisor | San Antonio, TX
November 2023 - Current*

- Designed and built a **client-side portfolio analysis terminal** (**HTML**, **Cloudflare Worker proxy**, **Python** data pipeline) with **multi-brokerage import**, **look-through concentration**, **tax-aware rebalancing**, and an **AI analysis workflow** routing **five model providers** under an **analysis-not-advice** compliance frame verified by **111 automated checks** and a **two-pass multi-agent adversarial audit** that **resolved 56 defects**
- Built a **Cloudflare Worker API proxy** fronting four market-data and five AI providers with **token authentication**, encrypted secrets, **KV caching**, provider **fallback chains**, and a health endpoint gating model selection, alongside a Python ingest pipeline computing returns, beta, alpha, and correlation matrices from ten years of price history
- Built a **LangGraph AI agent** for earnings analysis with **conditional routing**, **deterministic validation**, and a **retry loop** that fails loud to a human rather than shipping unverified output, authoring its state machine in Python
- Designed and operate a **multi-agent AI operating system** for lead research, enrichment, outreach, and content, with five specialist agents under an **orchestrator**, scheduled research jobs writing segment-scoped **JSON batches**, encoded **geographic, segment, and compliance rules**, and a custom **Lead Terminal** review app enforcing **human approval** before any send or publish

Education

Bachelor of Business Administration in Finance

The University of Texas At San Antonio, San Antonio, TX
